

Natural Language

- English, Hindi, Bengali...
- C++, Java?--- Formal language

NLP?

Natural language processing (NLP) is the ability of a computer program to understand human language as it is spoken or written

Motivation of Learning NLP?

- Huge amount of data in internet
 - in form of texts (Natural Language)
- Documents, Emails, Blogs, Social Media post
- Applications needed to process this huge amount of unstructured data

Relation between NLP and Text mining

- Natural language processing is responsible for understanding meaning and structure of given text.
- Text Mining or Text Analytics is a process of extracting hidden information inside text data

Applications

- Classification of text
- Sentiment analysis
- Automatic Question Answering
- Automatic Summarizations
- Recommendation systems
- Information Extraction (Structured information from email like calendar)
- Machine translation.

Applications

- A software program capture the sound of lecture delivery in a class and convert it to textual file which can eventually uploaded
- Software programs which will navigate the web, and give to the organization peoples feedback
- E-governance , Disaster Management

Voices in Social Media CAN NO MORE BE IGNORED IN GOVERNANCE

RT @rajbirbal:
There are
definitely
better methods
to curb traffic
and pollution
in **#NewDelhi**

CM is
beating his
drum none is
asking
commuters
#DelhiOddEven
Logic

@ArvindKejri
wal Less
traffic, less
pollution
#OddEven

Surge pricing
in @OlaCabs
as high as 3x
in the
evening

Informal variation of words (Noisy)

Variations	Excerpts from tweets
Variations in spellings of a word	
epicentre epicenter	6.7 magnitude #earthquake epicentre 49 km from Banepa in #Nepal says USGS 5.0 earthquake, 29km SSW of Kodari, Nepal. Apr 26 13:11 at epicenter
sindhupalchowk sindhupalchok sindupalchowk	#Sindhupalchowk 1100+deaths and 99% Houses are Down Indian national Azhar 23, missing. Last location Sindhupalchok. Plz help. Food Distribution in sindupalchowk, sufficient for 7 days for 500 victims
Arbitrarily shortened forms of a word	
building bldg	Earthquake destroyed hospital, road, building in Kavre district of Nepal. Nepal quake stresses importance of earthquake resistant bldg designs in entire NCR.
medical med	India: NDRF personnel, crack medical team with relief rushed to #Nepal 4 planes to leave for #Nepal tmrw carry meds, med team, 30-Bed Hospital

Ambiguous !!

- Need-tweets

- Chirayu hospital has been evacuated after cracks after #NepalQuake , ishan hospital treating patients on the road
- Emergency Alert Please support antibiotics and IV sets for earthquake victims being treated in Gandaki Medical College
- Water Scarcity at Valley !!! every hands wants at least one bottle drinking water !!! #earthquake #NepalQuake [url]
- There is shortage of Blood as well as oxygen cylinders...Nepal is in huge crisis

- Availability-tweets

- Dr. Madhur Basnet leading medical team going to remote villages of Gorkha dist which was epicenter of earthquake. His cell: [number]
- Govt launches national disaster helpline 1078 #Earthquake #Nepal #India [url]
- Round the clock - our medical team treats earthquake victims #IsraellnNepal [url]

AI and NLP

- Machine is considered to be intelligent if it understand, interpret and speak natural language
- The objective of NLP is to make computer/machines as intelligent as human beings in understanding language
- Natural language comes in two different forms:
 - one is the spoken utterances
 - other one is written communication

AI and NLP

- AI: Demanding machine should come closer to human being
- NLP: Computer being able to process human languages like English, Hindi
- NLP is forcing function for AI

Computer Lack knowledge

- No common sense knowledge
- No reasoning capacity
- No experience

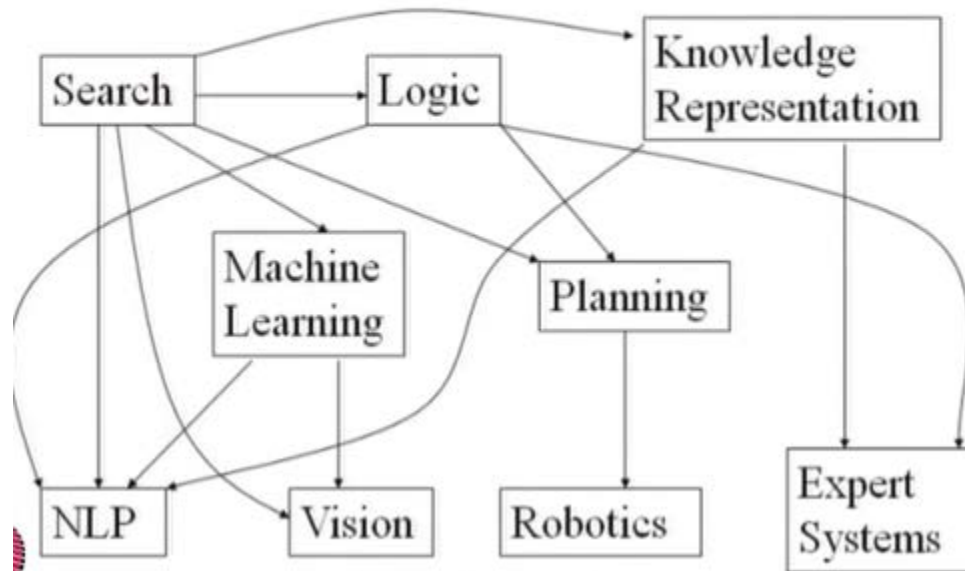

Unless we teach

AI perspective of NLP (pre-web)

Layers of AI

Perpectivising NLP: Areas of AI and their inter-dependencies

Layers Of AI

- First layer: Search, logic and knowledge representation
- Second layer: Machine learning and planning
- Final layer: Natural language processing, vision, robotics and expert systems

Planning

Planning is arranging a sequence of actions to achieve a goal

Sentence is containing
knowledge

knowledge has to be extracted
and embedded in the machine

Search

- “I went to the bank to withdraw some money” ---- Ambiguity
- A program will have to read the sentence left to right

Logic

- Textual knowledge has to be converted into logical forms which a machine can process
- proposition calculus, predicate calculus and some forms of non monotonic logic are used for natural language processing

Machine Learning

- The internet is full of textual documents

How much of data can human being possibly see?

Machine Learning

- Machine learning techniques, statistical techniques which look at the data and obtain the knowledge content of the data
- Machine learning is feeding into natural language processing

Other perspective of AI

- Robotics: Embedded s/w inside the robot enabling it to perform human like actions
- Vision: Ability of a computer to process a scene
- Expert System: Expert level performance , like emulating behaviour of experts like doctors

Goals and applications of NLP

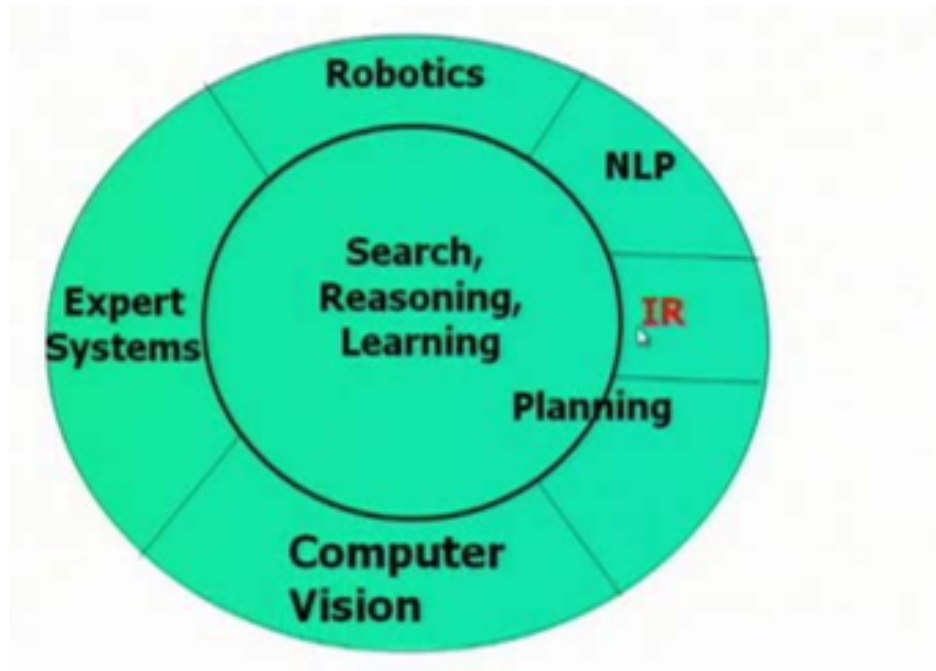

- Science Goal: Understand how we process and generate language
- Engineering Goal: Use NLP to solve real life problem (creates tools & resources)

AI perspective of NLP(post-web)

- Strong presence of Information Retrieval
- Machine learning contributed a lot to Information Retrieval

AI perspective of NLP(post-web)

IR

User satisfaction with respect to his or her information need (Query)

Depends on

- Ranking: Ranked according to relevance
- Coverage: How much of the information we have been able to capture

DIFFERENCE BETWEEN NLP, AI, ML, DL & NN

AI or Artificial Intelligence – Building systems that can do intelligent things.

NLP or Natural Language Processing – Building systems that can understand language. It is a subset of Artificial Intelligence.

ML or Machine Learning – Building systems that can learn from experience.

NN or Neural Network – Biologically inspired network of Artificial Neurons.

DL or Deep Learning – Building systems that use Deep Neural Network on a large set of data. It is a subset of Machine Learning.
